Penetration Testing as a Service (PTaaS)

Kunai Labs was founded as a **Penetration Testing as a Service (PTaaS)** company; even without our Kunai scanners and tools, we would find remarkable ways to test your environment using third-party tools. In our quest to make your organization the most secure and capable of withstanding any external or internal threats, we will leave no stone unturned.

Our Approach to PTaaS:

We will provide 24-hour protection for your company. With Kunai Labs **(PTaaS)**, you can access our expert penetration testing team. Our **(PTaaS)** staff will assist with identifying new malicious actors, interpreting real-time vulnerability assessments, and remediation.

Kunai Labs (PTaaS) designed around four principles...

TRANSPARENCY	AUTOMATION	REPORTING	FLEXIBILITY
Get instant access to our vulnerability and penetration testing findings as soon as we discover them	Integrate with Kunai proprietary continuous scanner to maintain surveillance on any newly found vulnerabilities	During the PTaaS process, detailed analysis with clear explanation can be downloaded at any moment	Kunai PTaaS can be adapted to meet your organization's specific requirements and offers round-the-clock assistance as a red or blue teams support

Kunai Labs **(PTaaS)** specializes in black, grey, and white box testing; our black box testing is not for the faint of heart, as we are applying all our resources and skills to infiltrate your infrastructure. Our grey and white box are slightly different but still an eye opener for our customers and is the most preferred testing within the cyber community.

White Box Testing

- Simulating an attack in which an adversary gains access to a privileged account
- Complete accessibility, including all applications and systems
- Most exhaustive and least likely to overlook a weakness
- Expensive with source code and data access

Gray Box Testing

- Determine an organization's susceptibility to insider threats
- Some internal information and access.
- More efficient than the black box in terms of time and money saved
- Use MITRE | ATT&CK

Black Box Testing

- Replicate a real cyberattack
- Zero access or no details regarding internal sources
- It is a swifter sort of strategy.
- Time-consuming takes genuine creativity.
- Use MITRE | ATT&CK

Human Expertise is the **Key** To Effective **PTaaS**!
